Summary

I'm a Full Stack Developer committed to delivering clean, efficient, and reliable applications tailored to each client's unique goals. By actively listening, building with precision, and continuously refining, I ensure every project not only meets expectations but exceeds them. My approach is rooted in understanding real-world challenges, solving meaningful problems, and crafting intuitive solutions that users genuinely value. With each project, I sharpen my ability to transform ideas into high-quality, results-driven digital products.

Education

Tribhuvan University, Himalaya College of Engineering

- **Coursework:** Bachelors in Science of Computer Science And Information Technology **(BSc.CSIT)**
- **Graduation:** 2023 Passed Out

Skills

- **Major Skills: React.js, React Native, Node.js, Express.js, MongoDB**
- **Languages:** JavaScript, Python, PHP, C++, C, SQL
- **Frameworks:** Next.js,Flutter, Laravel, Django
- **Extras:** TypeScript, Oracle DB, Awk, TailwindCSS,Postgres, Version Control

Experience

QwikIT Services - Frontend Engineer Internship — Saint John, Canada — Nov 1 – Jan 1 2023

- Built web applications that work exactly how clients envision them – clean interfaces with seamless functionality. By focusing on what users actually need, I delivered digital experiences that feel intuitive while performing flawlessly behind the scenes.
- Using Next.js, Django, and React.js, I built web application that meet clients' needs - focusing on creating solutions that are scalable, easy to maintain, and pleasant to use.

CAS Total Solution - Software Engineer — Putalisadak, Nepal — Dec 16 - May 15

- Developed customized scripts using Finacle Scripting Language for Core Banking Systems, integrating SQL and other technologies to deliver tailored solutions that precisely met client requirements—ensuring seamless banking operations and enhanced functionality.
- Developed comprehensive expertise in core banking operations through system, where I served as a developer and QA Engineer to rigorously validate all implementations - ensuring flawless functionality that matched both technical specifications and real-world banking needs.

AcmeIT - Full Stack Developer — Kathmandu, Nepal - Currently Working

- Engaged in building enterprise-level systems that effectively manage complex business workflows and scale seamlessly with organizational growth.
- Utilizing a modern tech stack—Node.js, PostgreSQL, Next.js, and Hono—to architect secure, high-performance, and maintainable solutions that align with evolving business and technical requirements.

Participation

SXC Sandbox - Hackathon St. Xavier's College

Developed a gaming website for kids to engage in competitive challenges, incorporating a points system that allows users to earn rewards. Implemented strategic advertisement placements to support financing through sponsorships and partnerships, contributing to the platform's growth and long-term sustainability.

EdEarn

Projects

Envision Nepal Envision Nepal

- Designed and developed a procurement website with an intuitive user interface, prioritizing ease of navigation to improve user experience.
- Tools Used: React, TailwindCSS, MongoDB, Nodejs, Express

Skin Disease Classification Skin Disease

- Developed a skin disease classifier using Keras and DenseNet architecture in TensorFlow, trained to accurately identify various skin conditions from image inputs. The model aims to assist dermatologists by providing more accurate and efficient diagnostic support.
- Tools Used: Nodejs, Express, Python, MongoDB

Chat App Chat App

- Built a real-time communication app using Node.js, Express, and Socket.io, enabling seamless messaging and data exchange. This project strengthened my backend development skills, with a focus on creating an interactive platform for user engagement.
- Tools Used: Nodejs, Express, Socket.io, HTML, CSS

Meeting App Meet App

- Built an interactive meeting application with chat and video call features, utilizing the Jitsi-Meet package for dependable communication. Crafted a streamlined, intuitive interface to optimize remote collaboration.
- Tools Used: Flutter, Dart, Firebase
