Summary

Full Stack Engineer with 3+ years of experience building production-grade applications using TypeScript, React, and Node.js. Experienced in developing scalable web systems, real-time applications, and leading TypeScript migrations that improved code reliability and developer efficiency. Strong focus on REST API design, performance, and maintainable architecture. Seeking to contribute to product-driven teams building high-quality, scalable software.

Technical Skills

- **Core Skills: TypeScript, JavaScript, Node.js**
- **Languages:** TypeScript, JavaScript, Python, SQL
- **Frontend:** React.js, Next.js, TailwindCSS, React Router v7, Zustand
- **Backend:** Node.js, Express.js, Hono, OpenAPI, REST API Design, WebSockets (Socket.io)
- **Databases**:PostgreSQL, MongoDB, Drizzle ORM, Query Optimization
- **Tooling:**Git, Docker, JWT, Zod, ESLint
- **Other**: System Architecture, API Design, Django, Laravel

Experience

AcmeIT - Full Stack Developer — Kathmandu, Nepal - Currently Working

- Architect and deliver production-grade web applications using **React Router v7, Node.js, and TypeScript**, enabling sophisticated multi-step business workflows for enterprise customers
- Directed the end-to-end migration of an npm developer library from JavaScript to **TypeScript**, removing an entire category of runtime type issues and reducing reported developer integration defects by **~40%**
- Planned and built modular **RESTful backend APIs** with a clear separation of concerns, cutting average feature development time by **~30%** across active initiatives

CAS Total Solution - Software Engineer — Kathmandu, Nepal Dec 2024 - May 2025

- Designed and implemented **Finacle automation scripts** integrated with SQL, cutting down manual effort within core banking transaction workflows
- Built and optimized backend logic for transaction processing modules, enhancing data handling robustness and clearing **QA validation** with **no critical defects** at production release
- Diagnosed and fixed **10+ system-level issues** in banking workflow logic, strengthening operational stability in high-volume production systems

Keon Themes - Full Stack Developer — Kathmandu, Nepal Mar 2023 – Dec 2024

- Built responsive, user-focused interfaces using **React.js**, translating Figma designs into clean, maintainable components and improving overall user experience.
- Developed scalable backend services using **Node.js and Express.js**, structuring code into modular, atomic components for maintainability and faster iteration.
- Designed and integrated **RESTful APIs** with optimized **PostgreSQL** queries, ensuring reliable data flow and consistent application performance.

Projects

Envision Nepal Envision Nepal

- Designed and developed a procurement platform with a clean, intuitive user interface, specifically addressing bidder usability challenges to streamline navigation, improve clarity during the bidding process, and enhance overall ease of use and efficiency.
- Tools Used: React, TailwindCSS, MongoDB, Nodejs, Express

Skin Disease Classification Skin Disease

- Developed a skin disease classifier using Keras and DenseNet architecture in TensorFlow, trained to accurately identify various skin conditions from image inputs. The model aims to assist dermatologists by providing more accurate and efficient diagnostic support.
- Developed a skin disease identification solution that helps general users recognize potential skin conditions from images, improving public awareness and enabling users to better understand symptoms and seek appropriate medical guidance.
- Tools Used: Nodejs, Express, Python, MongoDB

Chat App Chat App

- Built a real-time chat app using Node.js, Express, and Socket.io, enabling seamless messaging and data exchange. This project strengthened my backend development skills, with a focus on creating an interactive platform for user engagement.
- Communication platform that enables users to create private rooms and communicate, solving the need for focused, real-time interaction in closed user groups.
- Tools Used: Nodejs, Express, Socket.io, HTML, CSS

CCXT CCXT

- Worked on CCXT (CryptoCurrency eXchange Trading) by building exchange connectors, implementing buy/sell logic, manipulating cryptocurrency data, generating candlestick charts for trading analysis, and testing strategies on test networks to ensure accuracy and reliability.
- Tools Used: Python

Education

Tribhuvan University, Himalaya College of Engineering

- **Coursework:** Bachelors in Science of Computer Science And Information Technology **(BSc.CSIT)**
- **Graduation:** 2023 Passed Out

Participation

SXC Sandbox - Hackathon St. Xavier's College

EdEarn

Developed a gaming platform for children featuring competitive challenges and a rewards-based points system, integrated the Khalti payment gateway to enable secure transactions, and implemented strategic advertisement placements to support monetization through sponsorships and partnerships, contributing to sustainable platform growth.
